

Natural Wonders of the Earth by Molly Oldfield.

Published by Wren and Rock. Find out more about their books here:

www.wrenandrockbooks.com

Use the book to find out where in the World you can see:

1. The largest tree on earth, which is 83m tall and 31m in diameter
2. Largest salt flat, which can be found 3,656 m above sea level.
3. Lots of electric storms, and where lightning can strike 40,000 times a night
4. The Grand Prismatic Spring, which is bigger than a football pitch and deeper than a 10-storey building. Why is it brightly coloured?
5. Giant crystals that are 12m long, and 4m in diameter. How did the Cave of Swords get its name?
6. 100 million butterflies, 200 million wings, on a 4, 800 km journey. What are the butterflies called? Why do they fly so far, each year?
